

IN THE CLAIMS

Please amend the claims as follows:

Claim 1 (Previously Presented): A link manager comprising:

detecting means for detecting a link installation;

managing means for defining a plurality of link metrics indicating characteristics of each said link detected and managing data corresponding to said respective link metrics on a table;

link metric rank assigning means for assigning ranks to said respective link metrics, based on a predetermined preference;

data rank assigning means for assigning ranks to the data corresponding to said respective link metrics; and

selecting means for selecting a link by analyzing each link based on each individual stored metric in order of rank, and selecting a link corresponding to a record having data with a highest rank thus assigned, at a link metric with a highest rank.

Claim 2 (Original): The link manager according to Claim 1, wherein

said managing means generates a record comprised of the data corresponding to said respective link metrics, for each link on said table.

Claim 3 (Original): The link manager according to Claim 2, wherein

when a new link corresponding to neither said record is detected, said managing means generates a record corresponding to said new link and records data corresponding to link metrics of said link and wherein when a link corresponding to either said record becomes undetectable, said managing means deletes said record.

Claim 4 (Canceled).

Claim 5 (Previously Presented): The link manager according to claim 1, wherein when there exists a plurality of records having data with the highest rank thus assigned, said selecting means selects a link corresponding to a record having data with a highest rank thus assigned, at a link metric with a next highest rank.

Claim 6 (Previously Presented): A link management method comprising:

a detecting step of detecting a link installation;

a managing step of defining a plurality of link metrics indicating characteristics of each said link detected and managing data corresponding to said respective link metrics on a table;

a step of assigning ranks to said respective link metrics, based on a predetermined preference;

a step of assigning ranks to the data corresponding to said respective link metrics; and

a selecting step of selecting a link by analyzing each link based on each individual stored metric in order of rank, and selecting a link corresponding to a record having data with a highest rank thus assigned, at a link metric with a highest rank.

Claim 7 (Original): The link management method according to Claim 6, which comprises

a step of generating a record comprised of the data corresponding to said respective link metrics, for each link on said table.

Claim 8 (Original): The link management method according to Claim 7, which comprises a step wherein when a new link corresponding to neither said record is detected, a record corresponding to said new link is generated and data corresponding to link metrics of said link is recorded and wherein when a link corresponding to either said record becomes undetectable, said record is deleted.

Claims 9 (Canceled).

Claim 10 (Previously Presented): The link assignment method according to claim 6, wherein said selecting step comprises a step of, when there exists a plurality of records having data with the highest rank thus assigned, selecting a link corresponding to a record having data with a highest rank thus assigned, at a link metric with the next highest rank.

Claim 11 (Currently Amended): A computer program product including a computer-readable memory ~~computer storage medium~~ with a computer program code mechanism stored therein, which when executed by a computer causes the computer to perform a method of link management, comprising steps of:

detecting a link installation;

defining a plurality of link metrics indicating characteristics of each said link detected and managing data corresponding to said respective link metrics on a table;

a process of generating a record comprised of the data corresponding to said respective link metrics, for each link on said table;

assigning ranks to said respective link metrics, based on a predetermined preference;

assigning ranks to the data corresponding to said respective link metrics; and
when said predetermined preference is given, analyzing each link based on each individual metric in the ranking order of the respective metrics and selecting a link corresponding to a record having data with a highest rank thus assigned, at a link metric with a highest rank.

Claim 12 (Previously Presented): The computer program product according to Claim 11, which comprises a process of, when there exist a plurality of records having data with the highest rank thus assigned, selecting a link corresponding to a record having data with a highest rank thus assigned, at a link metric with a next highest rank.

Claim 13 (Previously Presented): The computer program product according to Claim 11 or Claim 12, which comprises a process wherein when a new link corresponding to neither said record is detected, a record corresponding to said new link is generated and data corresponding to link metrics of said link is recorded and wherein when a link corresponding to either said record becomes undetectable, said record is deleted.

Claim 14 (Canceled).

Claim 15 (Previously Presented): A link manager comprising:
detecting means for detecting a link installation;
managing means for defining a plurality of constant link metrics and variable link metrics, each indicating characteristics of each said link detected and managing data

corresponding to said respective link metrics on a table, said managing means monitoring the variable link metrics which vary over time; and

selecting means for selecting a link by analyzing each link based on each individual stored constant and variable link metric in order of rank, and selecting a link corresponding to a record having data with a highest rank thus assigned, at a constant or variable link metric with a highest rank.

Claim 16 (Previously Presented): The link manager according to Claim 15, wherein said managing means generates a record comprised of the data corresponding to said respective constant and variable link metrics, for each link on said table.

Claim 17 (Previously Presented): The link manager according to Claim 16, wherein when a new link corresponding to neither said record is detected, said managing means generates a record corresponding to said new link and records data corresponding to constant and variable link metrics of said link and wherein when a link corresponding to either said record becomes undetectable, said managing means deletes said record.

Claim 18 (Previously Presented): The link manager according to Claim 15, which comprises:

link metric rank assigning means for assigning ranks to said constant and variable link metrics, based on a predetermined preference; and

data rank assigning means for assigning ranks to the data corresponding to said constant and variable link metrics,

wherein when said predetermined preference is given, said selecting means selects a link corresponding to a record having data with a highest rank thus assigned, at a constant or variable link metric with a highest rank.

Claim 19 (Previously Presented): The link manager according to claim 15, wherein when there exists a plurality of records having data with the highest rank thus assigned, said selecting means selects a link corresponding to a record having data with a highest rank thus assigned, at a constant or variable link metric with a next highest rank.

Claim 20 (Previously Presented): A link management method comprising:

- a detecting step of detecting a link installation;
- a managing step of defining a plurality of constant link metrics and variable link metrics, each indicating characteristics of each said link detected and managing data corresponding to said respective link metrics on a table, said managing means monitoring the variable link metrics which vary over time; and
- a selecting step of selecting a link by analyzing each link based on each individual stored constant and variable metric in order of rank, and selecting a link corresponding to a record having data with a highest rank thus assigned, at a constant or variable link metric with a highest rank.

Claim 21 (Previously Presented): The link management method according to Claim 20, which comprises

- a step of generating a record comprised of the data corresponding to said respective constant and variable link metrics, for each link on said table.

Claim 22 (Previously Presented): The link management method according to Claim 21, which comprises a step wherein when a new link corresponding to neither said record is detected, a record corresponding to said new link is generated and data corresponding to constant and variable link metrics of said link is recorded and wherein when a link corresponding to either said record becomes undetectable, said record is deleted.

Claims 23 (Previously Presented): The link management method according to Claim 20, which comprises:

a step of assigning ranks to said constant and variable link metrics, based on a predetermined preference; and

a step of assigning ranks to the data corresponding to said constant and variable link metrics,

wherein said selecting step comprises a step of, when said predetermined preference is given, selecting a link corresponding to a record having data with a highest rank thus assigned, at a constant or variable link metric with a highest rank.

Claim 24 (Previously Presented): The link assignment method according to claim 20, wherein said selecting step comprises a step of, when there exists a plurality of records having data with the highest rank thus assigned, selecting a link corresponding to a record having data with a highest rank thus assigned, at a constant or variable link metric with the next highest rank.

Claim 25 (Currently Amended): A computer program product including a computer-readable memory ~~computer storage medium~~ with a computer program code mechanism stored therein, which when executed by a computer causes the computer to perform a method of link management, comprising steps of:

detecting a link installation;

defining a plurality of constant link metric and variable link metrics, each indicating characteristics of each said link detected and managing data corresponding to said respective link metrics on a table, and monitoring the variable link metrics which vary over time;

a process of generating a record comprised of the data corresponding to said respective constant and variable link metrics, for each link on said table;

assigning ranks to said respective link metrics, based on a predetermined preference;

assigning ranks to the data corresponding to said respective constant and variable link metrics; and

when said predetermined preference is given, analyzing each link based on each individual metric in the ranking order of the respective constant and variable metrics and selecting a link corresponding to a record having data with a highest rank thus assigned, at a constant or variable link metric with a highest rank.

Claim 26 (Previously Presented): The computer program product according to Claim 25, which comprises a process of, when there exist a plurality of records having data with the highest rank thus assigned, selecting a link corresponding to a record having data with a highest rank thus assigned, at a constant or variable link metric with a next highest rank.

Claim 27 (Previously Presented): The computer program product according to Claim 25 or Claim 26, which comprises a process wherein when a new link corresponding to neither said record is detected, a record corresponding to said new link is generated and data corresponding to constant and variable link metrics of said link is recorded and wherein when a link corresponding to either said record becomes undetectable, said record is deleted.

Claim 28 (Canceled)

Claim 29 (Previously Presented): A link manager comprising:

a detector configured to detect a link installation;

a processor configured to define a plurality of constant link metrics and variable link metrics, each indicating characteristics of each said link detected and managing data corresponding to said respective link metrics on a table, said managing means monitoring the variable link metrics which vary over time; and

a processor configured to select a link by analyzing each link based on each individual stored constant and variable link metric in order of rank, and selecting a link corresponding to a record having data with a highest rank thus assigned, at a constant or variable link metric with a highest rank.
